

CONQUEROR MAXIMIZATION INSIDER

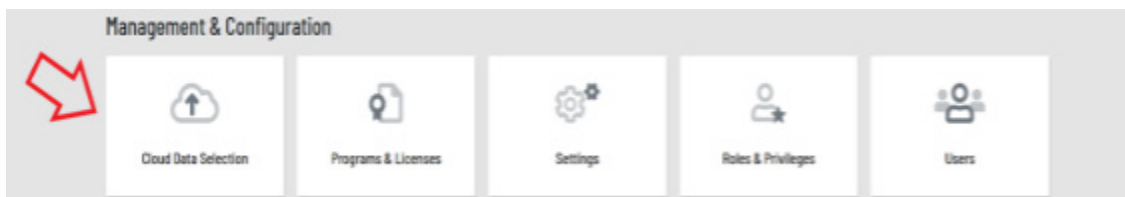

TECH TIP

Maximizing your Conqueror experience:

How to engage Secure Online Backups to protect your data

The **Conqueror Maximization Program (CMP)** includes many features dedicated to improving the operation of your business. Secure Online Backups are one of these features. The Secure Online Backups feature allows your center's data to automatically upload safely and securely to the cloud, protecting you from data loss in case of hardware failure. For centers with an active CMP account, here is how to engage Secure Online Backups, to ensure your data is protected.

- Access your personal QPortal page. If you have not previously accessed, you can reach your center's QPortal page by navigating to <https://qportal.qubicaamf.com>. Enter your center name in the search bar at the top of the page to locate the QPortal page for your location.
- Once signed in, scroll down to **Management & Configuration**, then select the button for **Cloud Data Selection**.

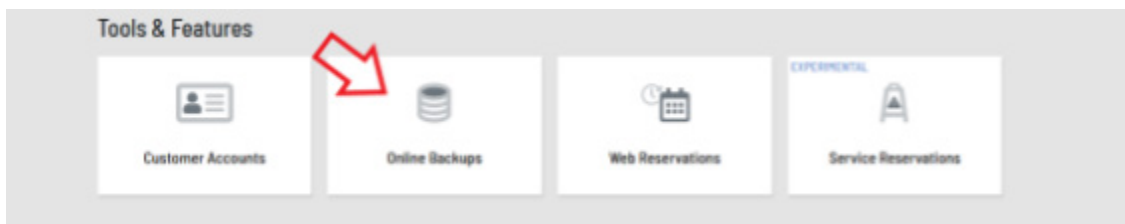

- From inside the **Conqueror Cloud Data Selection** screen, click on the toggle button for **Secure Online Backups** to move the status from disabled to enabled .

CONQUEROR MAXIMIZATION INSIDER

- Once you have enabled *Secure Online Backups*, your data will begin to upload to the cloud. From your main QPortal page, the data can be found under **Tools & Features** when you press the **Online Backups** button.

- Conqueror will now store rotating copies of the last seven backups of your center's data. In case of emergency, this data will remain secure and ready for you to utilize.

Conqueror Cloud Online Backups

The Online Backup Service safely stores copies of the last seven backups created by Conqueror. For security reasons, Conqueror can only upload backups to the cloud but cannot download or delete them. In case the online copy of a backup is needed, please contact the QubicaAMF Support team.

 Download

Number	Backup Date	State	Size	Files
1	03/14/2022 6:00:00 AM	Available	25.78MB	ConquerorBackup (7 files)
