

## Conqueror X: Creating a MMS Sequence

This document outlines creating a sequence in the Multi Media System. Sequences allow Conqueror X to display different pieces of advertising in a set order on the MMS monitors. For example, a price list can be displayed for a set time, followed by the waiting list for a set time. This works well for centers that have a lot of information to convey to guests in a visual form.

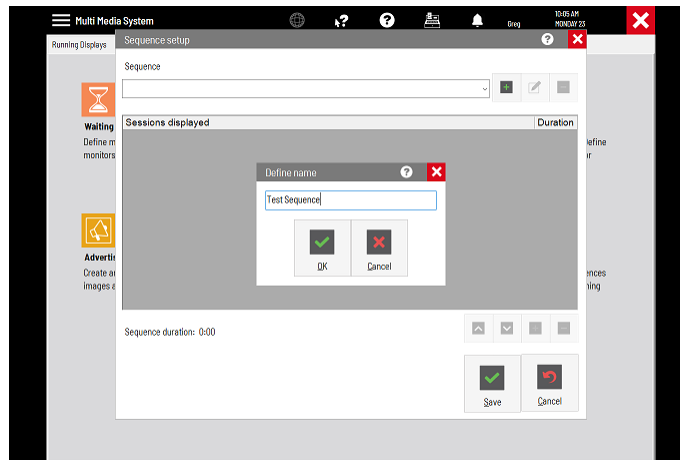

1. From the Conqueror X home screen, click on Setup, Modules & Options Setup, MMS Setup.

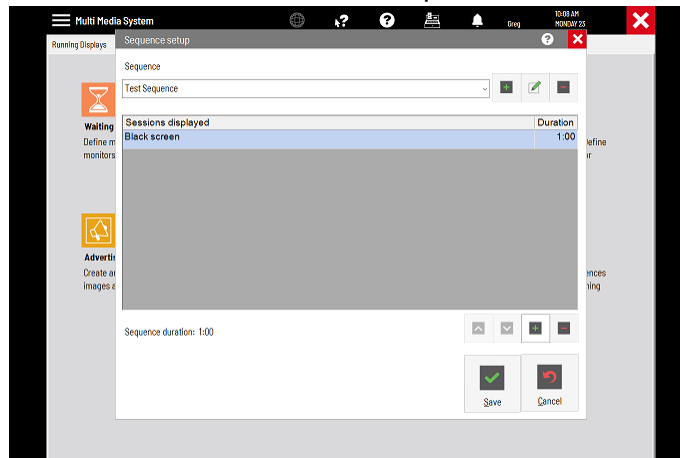

2. Click on the "Content Setup" tab, then click the "Sequence" icon.

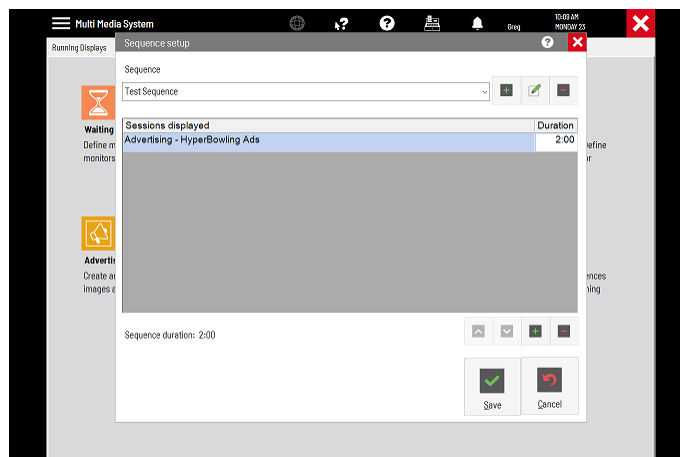

- Click on the green plus sign to create a new Sequence. Type in a name for the Sequence and click "OK."

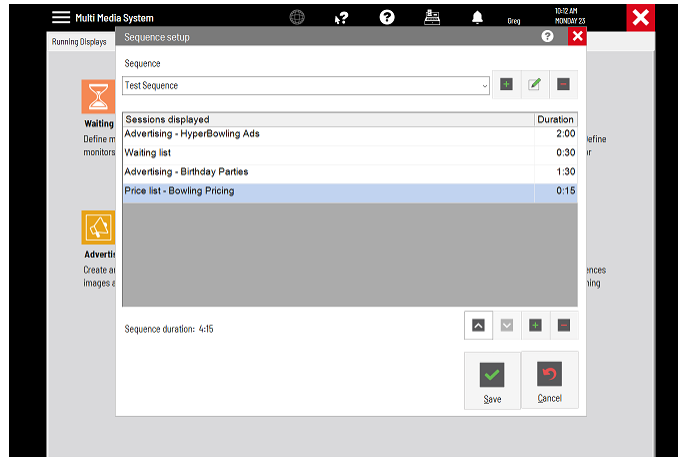

- To add items to the Sequence, click on the green plus sign above "Cancel."
- Under "Sessions displayed," a drop down will appear (it will say Black screen to start). Click on the dropdown and select the first item for the Sequence.

- Under "Duration," enter the length of time for that item to be displayed. (NOTE: if the item contains a video, make sure to enter enough time so that the video can be shown in its entirety)

- Repeat steps 4-6 to continue adding more items to the Sequence. Items within the Sequence can be re-ordered using the up and down arrows above "Save."

- When all items have been selected and the Sequence is in the correct order, click "Save" to complete the Sequence and return to the Multi Media System screen.
