

SPL

SPL Boutique

Feature	Description/Function	Benefit	SPL Boutique Lanes
Game Changing Appearance			
Game Changing Visual Impact	5 lane designs that move the center beyond the ordinary.	Differentiate your center or sections within your center and deliver a unique look and experience. Create VIP sections within the center and generate incremental revenue. SPL Boutique lanes are installed in centers on 6 continents and not just rendered by a graphic designer.	YES
Performance			
USBC Certified Lane Surface	An exclusive process used to create the SPL Select lane surface that results in beneficial friction and oil adhesion properties.	Bowlers experience better ball reaction, more consistency in the lane conditions because lane oil patterns last longer and higher scores as a result.	YES
Textured Approach	Approach surface designed with texture to facilitate proper bowler slide.	Bowlers experience a smooth, consistent slide.	YES
Durability			
Lane Joints Outside of High Impact Zones	The first joint in the SPL lane is approximately 12' from the foul line, falling outside the ball impact zone.	Longer lasting, lower maintenance lane.	YES
Overlap Pin Deck	The last lane panel overlaps & secures to the pin deck.	Pin deck can't shift position over time and get damaged from balls and pins.	YES
Parallel I-Beam Foundation	Engineered I-Beam design where the support beams run parallel to the lanes.	Eliminates crowns and depressions in the lane surface and provides a stronger, more dimensionally stable foundation. Lanes will last longer and cost less to own and maintain, leaving you with more money to drive your business.	YES
Lane Saver Replacement Process (for Lane Replacement only)	The first 24' of the old lane and 3' of the approach are replaced with new underlayment material.	Provides a flat, solid foundation for the new lane panels, ensuring better scoring and reliability performance.	YES
